SCL-90-R® Interpretive Report
30/01/2006, Page 2

ID: 310106
INTERPRETATION OF SCORES

The respondent's SCL-90-R symptom profile reveals a pattern and magnitude to be considered in the clinical range, and qualifies him as a positive clinical case.

Symptomatic distress levels are moderate to high-moderate for the respondent. Scores in certain areas are approaching, or have already penetrated the clinical range.

Overall intensity of distress is somewhat elevated and he has endorsed a fairly substantial number of symptoms.

The respondent reveals little evidence of psychological distress associated with somatic symptoms, or psychosomatic problems.

Levels of obsessive-compulsive symptoms are clearly in the clinical range. Discrete symptoms should be evaluated to determine whether these symptoms are associated with cognitive performance difficulties, which themselves may be secondary to anxiety or depressive disorders, or represent a true obsessive-compulsive syndrome.

The respondent reveals evidence of self-deprecation, feelings of inferiority, and a sense of inadequacy and self-doubt that is clinical in nature, and should be evaluated in greater detail.

Levels of depressive symptoms are elevated, and are currently approaching the clinical range. The client's status may require further monitoring, and underlying causes should be more closely reviewed.

There is no clinically significant evidence of phobic anxiety present in the client's protocol.

The respondent's record reveals extremely high levels of paranoid ideation. Such levels are almost certainly associated with a formal psychiatric disorder which possesses clear paranoid overtones.

There is evidence of an above average degree of social alienation in this test record, which should be further explored.

SYMPTOMS OF NOTE

The patient endorsed "Extremely" distressed for the following:

66. Sleep that is restless or disturbed.

The patient endorsed "Quite a Bit" distressed for the following:

8. Feeling others are to blame for most of your troubles.
18. Feeling that most people cannot be trusted.
38. Having to do things very slowly to insure correctness.
End of Report
